## DataSheet

SPD3000 Series Programmable DC Power Supply

## Main Features

- 3 Independent Controlled and Isolated Output: : 30V/3A $\times 2, \quad 2.5 \mathrm{~V}, 3.3 \mathrm{~V}, 5 \mathrm{~V} / 3 \mathrm{~A} \times 1$, Total Power 195 W
- Resolution: SPD3303C: 10mV, 10mA
- Support panel timing output functions
- LED display
- 3 kinds of output mode: Independent, series, parallel.
- 100V/120/220/230V compatible design, to meet the needs of different power grids.
- Intelligent fan of temperature control, effectively reduce the noise。
- Clear graphical interface, with the waveform display function
- Internal 5 groups of system parameter save/obtained, and support data storage space expansion
- Support SCPI, PC SoftWare \&USB Device。

## High-resolution and high-precision output

The highest resolution of $10 \mathrm{mV} / 10 \mathrm{~mA}$, Excellent setting and readback accuracy. Ensure accurate pure output .You can easily simulate the device accurate behavior under testing with small change in voltage or current. This is impossible for a low resolution power supply.

## Series/parallel/independent mode function

Series and parallel function allows two chanels combined into one output with more power output ability , This extends the application range. Each of 3 chanels power can be on/off independently and also can be all-on/all -off.

## Panel realize the timing output

Through the panel operation, 5 groups of timing Settings and output control can be realized, which provides users a simple power programming function. At the same time, cooperating with the PC software, it meets the most demand of communicating and controlling.

## Intuitive interface

Large and high resolution LCD display,concise human machine interface,make the machine easily used

## Application Field

```
- Debugging in R\&D
- Quality Control and Test
```

- Production Automatic Test
-Teaching Experiment

## - Specification

| Model | SPD3303C |  |  |
| :---: | :---: | :---: | :---: |
| Channel | CH1 | CH 2 | CH3 |
| Output Voltage | $0 \sim 30 \mathrm{~V}$ |  | 2.5/3.3/5.0V |
| Output Current | $0 \sim 3 \mathrm{~A}$ |  | $0 \sim 3 \mathrm{~A}$ |
| Display | 30 V full scale 4digits LED display |  |  |
|  | 3A full scale 3digits LED display |  |  |
| Resolution | 10mV/10mA |  |  |
| Program Accuracy | V : $\pm$ ( $0.5 \%$ of reading+1digits) |  |  |
